Mastering the art of co-creating with AI is no longer optional—it’s essential for anyone looking to stay ahead in an era where human-AI synergy redefines productivity and creativity. This course provides a hands-on introduction to working alongside AI to expand your capabilities, streamline your workflow, and unlock new opportunities for personal growth, professional success, and even financial gain.

In this course, you’ll dive into projects that showcase AI’s practical applications, such as generating blog posts tailored for SEO, creating and selling digital art on platforms like Etsy, writing e-books in genres like self-help or fiction, and designing engaging scripts for YouTube or podcasts. You’ll explore how to develop AI-driven chatbots, craft professional voiceovers, design eye-catching logos, and even offer translation services. Additional examples include creating personalized study guides for students or meal plans for niche audiences, providing innovative ways to solve real-world problems while monetizing your creativity.

The emphasis is on action and experimentation—not just learning how generative AI works, but understanding how to set ambitious goals, test bold ideas, and refine them into something remarkable. You’ll be encouraged to share, collaborate, and grow in a supportive environment that values innovation and learning through failure. Whether you aim to start a side hustle, build a new career, or simply expand your creative toolkit, this course offers the skills and inspiration to turn AI into your most powerful ally. 任课老师:

Grace Shan

I am a 9th grader at the Clayton High School. I wanted to start this class to help kids and teens who wanted to make money. I specifically wanted to teach a business/marketing class because when I was in 6th grade, I created two successful businesses by myself. I experienced the ups and downs of owning a business, learned some valuable lessons about competition, pricing, strategies and more. Now, I want others to learn those lessons beforehand to become prepared.

Emma Huang

I am an 8th grader at the John Burroughs School. My goal in teaching this class is not only to be able to impart my knowledge to others but also to learn and improve myself. My business experience may not be as considerable as Grace's, but I would say that my expertise lies more in teaching. I have taught subjects from art to math and have thoroughly enjoyed all of it. So, not only do I want to gain more experience in the process of teaching but also want to help students explore the depths of business through this class.

指导老师:

I am Hong Chen, an Associate Professor of Biomedical Engineering and Neurosurgery at Washington University in St. Louis. I'm a Senior Member of the National Academy of Inventors and have entrepreneurial experience. I have spent the past six years teaching undergraduate and graduate students how to identify unmet business needs, propose innovative solutions, and develop startup concepts. As a mentor, I will fully support Grace and Emma in their teaching endeavors, including assisting them in course preparation, participating in classroom instruction, and providing feedback on their teaching. This course will offer your child valuable knowledge and practical experience, stimulate their innovative potential, and cultivate their business skills.
